WENQI ZENG (KATHLYN)

wenqizeng@hsph.harvard.edu | +1 (217) 402-1902 |Boston, MA, 02215| https://www.linkedin.com/in/wenqi-zeng947/

EDUCATION

Harvard University 05/2026 (Expected)
M.S. in Health Data Science GPA: 4.0/4.0

University of Illinois at Urbana-Champaign (UIUC) 05/2024 (Graduated with Highest Honor)
B.S. in Statistics and Economics GPA: 4.0/4.0

SKILLS

- **Language/Tools**: Python (pandas, scikit-learn, Matplotlib), R (dplyr, tidyverse, ggplot2), MySQL, MongoDB, Spark SQL, SAS, MATLAB; PyTorch, TensorFlow, Tableau, Power BI, Hadoop, AWS (S3, EC2, EMR), Google Cloud
- **Modeling:** Linear Regression, Lasso & Ridge Regression, Logistic Regression, Decision Trees, Random Forests, XGBoost, KNN, K-means, PCA, Deep Learning (CNN, RNN, GAN), NLP (Text processing, Sentiment, Analysis)

PROFESSIONAL EXPERIENCE

TikTok, San Jose, US. ***Data Scientist Intern*** 05/2025 – 08/2025

- Conducted **seasonal and user analysis** of core Europe LIVE KPIs; quantified magnitude of seasonal effects and profiled key contributing user groups, enabling the recommendation team to adapt stragetis for future metric shifts.
- Designed and executed **A/B and AA causal inference analyses** for the LIVE AB experiment evaluating a strategy balancing user lifetime and the Live ecosystem; provided decisive data support to leadership to revert the strategy.
- Performed **attribution analysis** on abnormality of the LIVE content screening model, validated the structure-shift hypothesis, which pinpointed the model optimization directions and **improved model filtering efficiency by 20%.**
- Built the Governance **All-in-One Dashboard**, automating data pulls (SQL) and updates to enable 100% real-time tracking of core metrics with multi-dimensional aggregation**, reducing ad-hoc data requests by 70%**

Mayo Clinic, Rochester, US ***Computational Pathology and AI Intern*** 09/2025 – 12/2025

- Building a **Hidden Markov Model (HMM)** in Python to analyze diagnostic test sequences, establishing a baseline for predicting neuropathology diagnoses from expert historical data.
- Developed an AI-driven diagnostic support tool leveraging **POMDP** framework using information theory to calculate entropy and information gain to recommend optimal diagnostic tests, improving test selection efficiency.
- Executing **EDA** of clinical cases to define model parameters for a multi-modal AI decision support system.

Tencent, Shenzhen, China ***Fintech Data Scientist Intern*** 06/2024 – 08/2024

- Designed time-series analysis on payment transactions using Python to visualize seasonal trends, cross-correlations, and distributions. Applied statistical tests **(Shapiro-Wilk, KS test)** and **VIF checks** for multicollinearity reduction, identifying **10 key features** strongly correlated with payment amount, enhancing business insights
- Built and fine-tuned LightGBM, Prophet, and NeuralProphet models using lag feature engineering and rolling time window predictions, which performed hyperparameter tuning and evaluated the impact of holiday features on prediction accuracy, reducing **MAPE from 14% to 7%** and was applied to **China's largest** instant funding service.
- Implemented the most advanced models, including **AutoARIMAProphet and SOFTS**, focusing on reducing prediction processing time, and conducted comparative analysis of prediction accuracy and runtime, which **decreased processing time by 67% (from 30s to 10s),** deployed for real-time demand forecasting in the backend system.
- Developed an **Excel-based automation system** using PivotTables and dynamic formulas to standardize and simplify the reporting of online transaction penetration metrics**, reducing manual reporting time by 50%** and improving data accuracy and accessibility for strategic decision-making, which has been used by a team of **30+ data scientists.**

Wissee Technology, Seattle, US. ***Marketing Data Scientist Intern*** 05/2022 – 01/2023

- **Built an NLP pipeline** to process and tokenize **3700+ Instagram posts** using Python, applying Named Entity Recognition and sentiment classification models to extract brand mentions, product attributes, and engagement signals for trend detection and influencer profiling, leading to a **208% increase in GMV for clients**
- Collected and cleaned influencer pricing data from **over 1,000 entries** using **SQL and Python**, visualizing comparisons across platforms and regions via **Tableau**. Identified pricing trends and market gaps, supporting strategic pricing adjustments and influencing o**ver $100,000 in campaign budget allocations**

PROJECT EXPERIENCE

InfluencerLens – Multimodal RAG Platform, Boston, MA 09/2025 – 12/2025

Built an end-to-end **RAG** pipeline integrating OpenAI APIs, Neo4j graph retrieval, and BM25 + vector fusion with reranking, and deployed it via FastAPI + Docker as a scalable **generative AI** platform for influencer recommendation.
